*Rocznik niniejszy stanowi piąte z kolei zestawienie materiałów fenologicznych w okresie powojennym.*

*Biorąc pod uwagę brak tego rodzaju opracowań z okresu międzywojennego Państwowy Instytut Hydrologiczno-Meteorologiczny uważał za konieczne jak najszybsze opublikowanie materiałów zebranych po wojnie, a tym samym udostępnienie ich osobom zainteresowanym.*

*Duże trudności napotkane przez PIHM przy organizowaniu sieci fenologicznej spowodowały, że rozmieszczenie punktów fenologicznych w terenie jest przypadkowe i niejednolite. Niemniej, uzyskana pięcioletnia seria obserwacji fenologicznych może posłużyć do wyciągnięcia pewnych wniosków przy opracowaniach naukowych.*

*Rocznik ten został opracowany w Sekcji Fenologii Działu Meteorologii i Klimatologii Rolniczo-Leśnej i Fenologii PIHM przez pracowników: mgr. inż. Szpringera Henryka, Taraszkiewicza Władysława i Małecką Mirosławę.*

*Opracowanie Rocznika 1951 przewidziane jest jeszcze w r. b.*

*DYREKTOR PIHM*
*Doc. dr inż. J. Lambor*

# *W s t ę p*

Wyniki obserwacji fenologicznych za rok 1950 zostały opracowane w ten sam sposób jak Roczniki z lat poprzednich.

Umieszczony w tym Roczniku materiał został dokładnie przejrzany, sprawdzony naukowo i usystematyzowany.

W Roczniku tym nie zostały jednak uwzględnione obiekty, nad którymi prowadzono spostrzeżenia tylko w nielicznych miejscowościach jak również fałszywe daty pojawów w świecie zwierzęcym, roślinnym i w przyrodzie nieożywionej. Daty natomiast wątpliwe zostały umieszczone ze znakiem zapytania.

Liczba stacji fenologicznych w 1950 r. wynosiła na całym obszarze kraju 539 i były one dosyć równomiernie rozmieszczone na terytorium Polski.

Na początku Rocznika został umieszczony alfabetyczny spis stacji fenologicznych w Polsce w 1950 r. wraz ze współrzędnymi geograficznymi i wzniesieniem nad poziomem morza. Poza tym w spisie miejscowości podano stronicę, na której są one umieszczone w poszczególnych tablicach Rocznika.

Skróty w rubryce „czas dojrzewania" w tablicy III, IV i V oznaczają: w — wcześnie, św. — średnio wcześnie, ś — średnio śp — średnio późno i p — późno.

Na treść Rocznika 1950 składa się 11 tablic, z czego pierwszych dziesięć obejmuje fitofenologię, ostatnia zaś tablica zawiera obserwacje nad światem zwierzęcym — zoofenologię.

Fitofenologia podzielona została na 3 grupy:

A — Tablice I i II — rośliny dziko rosnące i hodowane.

B — Tablice III, IV, V i VI — rośliny rolnicze.

C — Tablice VII, VIII, IX i X — drzewa owocowe.

W Roczniku zostały wprowadzone pewne zmiany w zakresie obiektów obserwacji, a mianowicie:

Tablica I — pominięto obserwacje otwierania się pąków liściowych u kasztanowca.

Tablica II — zamiast róży dzikiej wprowadzona została poziomka dzika (Fragaria vesca), zamiast konwalii i chabru — borówka czarnica (Vaccinium myrtillus) oraz borówka brusznica (Vaccinium vitis idaea).

Tablica III — pominięte zostały obserwacje początku wiosennego tajania śniegu i możności wykonania ostatniej przedzimowej orki.

Tablica V — pominięto obserwacje maku i konopi, wprowadzono natomiast buraki cukrowe (Beta vulgaris) i łubin żółty (Lupinus luteus).

Tablica VI — umieszczone zostały obserwacje tylko pokosu pierwszego łąk i koniczyn.

Tablica VII — zamiast brzoskwini wprowadzono wiśnię (Prunus cerasus) Ostheimską.

Tablica VIII — wprowadzono gruszę (Pirus communis) Salisbury zamiast czereśni Różowej wczesnej, która obecnie umieszczona została w Tablicy X.

Tablica X — zamiast krzewów owocowych i rośliny zielnej — truskawki zawiera pięć odmian czereśni: Różową wczesną, Czarną późną, Miodówkę, Frommę i Najwcześniejszą Marchijską.

W pozostałych tablicach z fitofenologii skład roślin nie uległ zmianie, również w tablicy XI zawierającej spostrzeżenia nad światem nie wprowadzono żadnych zmian.
